Institut für rechnergestützte Modellierung
im Bauingenieurwesen

Prof. Dr.-Ing. Henning Wessels

Exercise 1

Task 1:

1. Find an example for a syntax error.

2. Find an example for a semantic error.

3. Find an example for a logical error.

Task 2:

1. Write a program that prints the "Hello, World!" message.

2. Write a program that prints the "Hello, World!" message 10 times.

Task 3:

1. Write a program that uses a command-line argument.

2. Try to execute this program with each of the following command lines:
   a) Python
   b) <<$&%
   c) 12345
   d) Bob
   e) Alice Bob

Task 4:

Create a program that takes three names and prints out a proper sentence with the names in their reverse order, for instance: **Alice Bob Carol** results in **Hi Carol, Alice, Bob**
